

IN THE CLAIMS

1. (currently amended) A reservation information setting apparatus, comprising:

schedule table forming means for controlling the display of a schedule table that includes calendar information, said schedule table forming means being operable to control the display of the schedule table so as to enable one month of calendar information to be displayed on a single display screen;

date selection accepting means for accepting a selection input of a target date in said schedule table;

schedule information accepting means for accepting an input of user schedule information for said target date; and

reservation information accepting means for accepting an input of reservation information for a broadcast program on said target date,

said user schedule information representative of a number of events pertaining to a user which are not related to broadcast programs, in which each of the number of events is displayable as a pictograph,

said schedule table forming means including means for enabling each said pictograph of each event occurable within a respective month to be displayed on the single display screen of the respective month of calendar information.

2. (original) A reservation information setting apparatus according to Claim 1, further comprising:

display instruction accepting means for accepting an input of an instruction to display a broadcast program guide corresponding to said target date if said selection input of said target date is accepted by said date selection accepting means; and

broadcast program guide forming means for forming a signal for displaying said broadcast program guide if said input

of said instruction to display said broadcast program guide is accepted by said display instruction accepting means;

wherein said reservation information accepting means accepts said input of said reservation information through said broadcast program guide.

3. (previously presented) A reservation information setting apparatus according to Claim 1, wherein said displayed schedule table includes said user schedule information for said target date and said reservation information for said broadcast program on said target date.

4. (original) A reservation information setting apparatus according to Claim 2, wherein said broadcast program guide is based on program guide information included in a broadcast signal.

5. (currently amended) Electronic equipment, comprising:

a reservation information setting apparatus, including schedule table forming means for controlling the display of a schedule table that includes calendar information, said schedule table forming means being operable to control the display of the schedule table so as to enable one month of calendar information to be displayed on a single display screen; date selection accepting means for accepting a selection input of a target date in said schedule table; schedule information accepting means for accepting an input of user schedule information for said target date; and reservation information accepting means for accepting an input of reservation information for a broadcast program on said target date, said user schedule information representative of a number of events pertaining to a user which are not related to broadcast programs in which each of the number of events is

displayable as a pictograph, and said reservation information including said target date and a broadcast time on said target date, and said schedule table forming means including means for enabling each said pictograph of each event occurable within a respective month to be displayed on the single display screen of the respective month of calendar information;

reservation information storing means for storing said reservation information for said broadcast program on said target date; and

viewing control means for controlling the display of said broadcast program upon arrival of said target date and said broadcast time in said stored reservation information.

6. (currently amended) Electronic equipment, comprising:

a reservation information setting apparatus, including schedule table forming means for controlling the display of a schedule table that includes calendar information, said schedule table forming means being operable to control the display of the schedule table so as to enable one month of calendar information to be displayed on a single display screen; date selection accepting means for accepting a selection input of a target date in said schedule table; schedule information accepting means for accepting an input of user schedule information for said target date; and reservation information accepting means for accepting an input of reservation information for a broadcast program on said target date, said user schedule information representative of a number of events pertaining to a user which are not related to broadcast programs in which each of the number of events is displayable as a pictograph, and said reservation information including said target date and a broadcast time on said target date, and said schedule table forming means including means for enabling each said pictograph of each event occurable within a

respective month to be displayed on the single display screen of the respective month of calendar information;

reservation information storing means for storing said reservation information for said broadcast program on said target date;

information signal storing means for storing an information signal; and

recording control means for controlling the recording of said broadcast program in said information signal storing means upon arrival of said target date and said broadcast time in said stored reservation information.

7. (currently amended) A reservation information setting method, comprising:

displaying a schedule table that includes one month of calendar information which is displayable on a single display screen;

accepting a selection input of a target date in the schedule table;

accepting an input of user schedule information for the target date; and

accepting an input of reservation information for a broadcast program on the target date,

said user schedule information representative of a number of events pertaining to a user which are not related to broadcast programs, in which each of the number of events is displayable as a pictograph, and

enabling each said pictograph of each event occurable within a respective month to be displayed on the single display screen of the respective month of calendar information.

8. (original) A reservation information setting method according to Claim 7, further comprising:

accepting an input of an instruction to display a broadcast program guide corresponding to the target date if the selection input of the target date is accepted; and

displaying the broadcast program guide if the input of the instruction to display the broadcast program guide is accepted;

wherein, in said reservation information accepting step, the reservation information is accepted through the displayed broadcast program guide.

9. (previously presented) A reservation information setting method according to Claim 7, wherein the step of displaying the schedule table includes displaying the schedule table with the user schedule information for the target date and the reservation information for the broadcast program on the target date.

10. (original) A reservation information setting method according to Claim 8, wherein the broadcast program guide is included in a broadcast signal.

11. (original) A reservation information setting method according to Claim 7, further comprising:

storing the reservation information for the broadcast program on the target date, the reservation information including the target date and a broadcast time on the target date; and

controlling the display of the broadcast program upon arrival of the target date and the broadcast time in the stored reservation information.

12. (original) A reservation information setting method according to Claim 7, further comprising:

storing the reservation information for the broadcast program on the target date, the reservation information including the target date and a broadcast time on the target date; and

recording the broadcast program upon arrival of the target date and the broadcast time in the stored reservation information.

13. (previously presented) The reservation information setting apparatus according to claim 1, wherein the number of events includes a meal engagement and/or attendance at a concert.

14. (previously presented) The electronic equipment according to claim 5, wherein the number of events includes a meal engagement and/or attendance at a concert.

15. (previously presented) The electronic equipment according to claim 6, wherein the number of events includes a meal engagement and/or attendance at a concert.

16. (previously presented) The reservation information setting method according to claim 7, wherein the number of events includes a meal engagement and/or attendance at a concert.
